HARDWARE MODULES

The Accolade Group recommends hardware for use with the warehouse software modules depending on the specific usage requirements of our clients.

Hardware requirements are broken into two general categories.

- Wireless Capable (WIFI)
- Mobile (GSM or 3G) Capable Handheld Scanners

The warehousing software modules work with practically any **Windows CE/ Pocket PC** type devices that provide barcode scanning capabilities. This ensures that a full range of devices from portable handheld mobile devices, to fully weather proofed, drop rated, rugged scanners for use in industrial applications are available. There is no lock-in, in relation to equipment providing a full range of options to suit your budget and usage needs.

For most businesses, accuracy, timeliness and overall efficiency are paramount when handling of inventory from the time it is received at the warehouse, to when it is packed and sent out to your customers.

Many businesses who deal with inventory have aspirations of using barcode scanning and other technologies to help them achieve these goals.

When businesses start researching barcoding and scanning solutions, they find most software falls into two categories: Simple or Complex.

Simple barcoding software offers barcode scanning through keyboard wedge style scanners that do little more than basic automation of keyboard input.

Complex, high-end Warehouse Management Systems (WMS) will do everything required, but also much more than that is required. These systems tend to be complex, requiring expensive consultation and configuration - not to mention the integration required to your ERP/Inventory package.

This is where ACCSCAN comes in – a seamless, fully integrated module that works with Jiwa Financials software, delivering exactly what is required without expensive overheads.

STOCK ENQUIRY

- Real-time stock on hand
- Stock by bin location
- Stock by current warehouse
- Stock in other warehouses

STOCK RECEIPT

- Find outstanding orders by Supplier, Item Received or Purchase Order number
- Full validation of receipt against order
- Handle quantity variances, including partial receipt
- Handle non-ordered items
- Activation of the incoming stock receipt as a standard Stock Receipt form
- Scan stock based on its outer packaging – automatically converting the units to individual unit.

WE PROVIDE
CUSTOMISATIONS
TO SUIT **YOUR BUSINESS**

SHIPMENT BOOK-IN

- Book stock in, on smaller batches without increasing paperwork
- Make Stock available for sale more quickly – even when receiving large volumes
- Automatically recognise when to receive an order as a local purchase order receipt, or as a landed-costing shipment book-in.

STOCK TAKES

- No double handling, as soon as it is counted its available to the stock take manager
- Ensure accurate identification of items being scanned
- Removes illegibility from handwriting stock taking tickets
- Process the stock take results as soon as the last count is completed
- Full approval process at end of stock take, allows manager to request re-counts where substantial variances exist
- Allows multiple users to be participating in stock takes
- Periodic rolling stock takes on selected items available

SCAN & PACK

- Reduce picking errors through validation of SKU's and quantities picked
- Improve picking efficiency through directed picking (ie picking by bin locations in logical order)
- Process many orders through your ware-house by eliminating the paper shuffle between order processing and ware-house staff
- Real-time feedback to customer service / order entry on picking status of each order
- Adjustments to orders processed automatically on completion of picking
- Automatic printing of invoices where workflows require it
- Follows the same process for EDI and non EDI type orders.
